

CYBERSECURITY MATURITY MODEL CERTIFICATION

DELIVERING PERFORMANCE BEYOND COMPLIANCE

BGS Roadmap to CMMC

As a CMMC Authorized RPO, BGS prepares organizations for certification with a pre-assessment, gap analysis, and roadmap to the desired CMMC maturity level. The roadmap will include cost-effective on-premise, cloud, or hybrid options to

- Convert an existing environment,
- Segment a portion of an existing architecture
- Host a new compliant infrastructure

BGS addresses compliance deficiencies by providing customized compliance documentation, digital transformation and modernization services, infrastructure modifications, implementation of new software/hardware, and process improvements

For organizations who are ready for certification, BGS assesses organization for CMMC Certification with authorized assessors who evaluate against compliance standards and recommends for certification at the desired compliance level.

To Receive a CMMC Certification,
100% of Controls Must Be Compliant

CMMC is required for prime and subcontractors doing business with the Department of Defense to comply with DFARS Clause 252.204-7021 and NIST SP 800-171.

THE BGS DIFFERENCE

- ✓ Chosen by the Department of Defense as one of the first 4 companies approved to perform compliance assessments
- ✓ Recognized as an industry leader in Cybersecurity for secure environments
- ✓ Expertise in securing Industrial Control Systems and Enterprise Business Systems
- ✓ Experienced, Cleared Compliance Experts
- ✓ Delivering Cost-Effective, Efficient Solutions for government programs since 2007
- ✓ Minority Owned Small Business

BGS OFFERS COST-EFFECTIVE, RELIABLE SOLUTIONS TO DELIVER PERFORMANCE BEYOND COMPLIANCE

CMMC requirements encompass technical and architectural specifications as well as required plans, policies, and procedures. For example, CMMC Maturity Level 3 requires 130 security practices and 51 processes that impacts multiple departments within the organization. Organizations need a comprehensive set of cybersecurity practices and processes for CMMC compliance. An RPO Assessment is used as a CMMC pre-assessment to identify the gaps and actions for compliance.

If not thoughtfully implemented, actions to achieve compliance can be expensive, time consuming, disruptive, and impact operations.

BGS conducts a RPO Assessment to understand the unique needs of the organization and provide a compliance gap analysis. We can then customize a roadmap with cost-effective, reliable solutions that enable performance while complying with CMMC requirements.

For example, customizable templates provide required documentation that is easily adapted to the customer environment.

BGS delivers a tailored CMMC implementation that is secure, reliable, and cost-effective by bringing expert resources, efficient processes, and effective technologies to meet your operational needs.

Compliance Trends

- **CMMC Certification requires 100% compliance.**
- Typically, compliance ranges between 10%-75%, with the higher compliance rates for organizations with other maturity model certifications
- Average time to address gaps ranges is 3-6 months of remediation
- The sooner an RPO evaluation is conducted, the better prepared you will be for prompt certification
- CMMC is cited in non-DoD procurements, (e.g. STARS III and Polaris), and is being adopted across the government.
